

Subject: ARPA-E Fellows Program  
Sent on behalf of Dr. Arun Majumdar, Director  
Advanced Research Projects Agency - Energy (ARPA-E)  
U.S. Department of Energy

Colleagues,

I want to take this opportunity to let you know that today at the Massachusetts Institute of Technology, in a presentation to the MIT Energy Club, I am announcing the creation of the "ARPA-E Fellows Program" and calling on the next generation of energy leaders to join ARPA-E to help shape our nation's energy future.

The "ARPA-E Fellows Program" will consist of highly technical scientists and researchers, who will actively help create the strategic direction and vision of the country's first agency devoted exclusively to transformational energy technology research and development. Fellows will support ARPA-E's Program Directors in program creation, while also undertaking independent explorations of promising future research areas for the agency. Fellows will also engage with world class researchers and innovators to develop theses for high impact ARPA-E research program areas, prepare energy technology and economic analyses, and make recommendations to DOE senior management.

Program participants will be expected to have strong technical backgrounds and deep expertise in at least one energy technology related field. Senior Fellows should have more than three years of relevant work experience in energy innovation related fields, while Fellows will represent postdoctoral researchers and recent graduates with less than three years of work experience. Participants will be competitively selected from the best and the brightest up and coming researchers and entrepreneurs in the U.S. energy sector.

ARPA-E Fellow terms will not exceed two years. All ARPA-E Fellows and Senior Fellows are full-time federal employees paid at a competitive salary. Interested candidates should visit:
