

Diversity and Distributions

A Journal of Conservation Biogeography

Edited by:

David M. Richardson

Print ISSN: 1366-9516

Online ISSN: 1472-4642

Frequency: Bi-monthly

Current Volume: 15 / 2009

ISI Journal Citation Reports® Ranking: 2007: 7/27 (Biodiversity Conservation); 29/116 (Ecology)

Impact Factor: 2.965

Top Author Guidelines

Average time between receipt of manuscript and first editorial decision is now 43 days!

Diversity and Distributions has five main categories of articles: -

1. Biodiversions. These are editorial items solicited directly by the Editor. Unsolicited material will not normally be considered. If you have an idea for such a contribution (up to 2000 words), please contact the Editor, who will provide you with the necessary guidance for submission.

2. Biodiversity Viewpoints. This section contains short essays (usually up to 3000 words) considering biodiversity from a particular disciplinary, regional, political, or other standpoint. If you would like to contribute such an essay, please contact the Editor outlining the distinctive character of your proposed essay, its length, the number of references, and the character of any illustrations to be used.

3. Biodiversity Research and Reviews This is the core section of the journal and presents research or review articles up to 5000 words in length, but preferably shorter. Tables should not be overlong and complicated. The Editor reserves the right to publish long tables and appendices on the journal's website, rather than in the printed version. Such a decision will only be taken after consultation with the author. A short running title should be provided. The manuscript must include an abstract of no more than 300 words structured under the headings: Aim, Location, Methods, Results, Main conclusions, and ending with a list of up to six Keywords or phrases, arranged in alphabetical order. Three different weights of headings are available: authors should indicate the relative importance of a heading by the use of ringed capital letters. i.e. (A) for main headings; (B) for secondary headings; and, (C) for tertiary headings. The correct nomenclatural authorities for all taxa must be given on the first appearance in the text, in Tables, and in the captions to Figures, unless a general reference to a standard source is provided at an appropriate place in the manuscript.

4. Biodiversity Letters. This section presents short items (normally less than 1000 words) of general news interest with respect to biodiversity, conferences or events, computer hardware and software developments, films and videos, the law, and political debates. Brief letters to the editor are also most welcome. Lively titles are encouraged, and material should be as topical as possible. Longer letters (up to 2500 words in total) prompted by papers previously published in this or occasionally other journals are also encouraged. Such longer communications should include a one-paragraph abstract (150 word maximum), and a list of 6-10 keywords.

Manuscript preparation and submission

Diversity and Distributions requires online submission of manuscripts at <http://mc.manuscriptcentral.com/ddi>. Submission online is an intuitive, step-by-step process. By submitting online, you will benefit from quicker peer-review, web-based manuscript tracking, online reviewing and faster response. You will need your manuscript and figures in a digital format. When submitting, authors should upload a single file that contains all text (including a short running title, references, tables, figure captions and appendices) and figures, which should be embedded into the document. A PDF file will then automatically be created for reviewing purposes. Full instructions and support for authors can be found at the Site. To use the Site you will need a user ID and password. Go to the Journal's submission homepage (<http://mc.manuscriptcentral.com/ddi>) and click 'Create a new account' if you have not registered before, or click 'Check for existing account' if you have submitted online or reviewed online before for the Journal (or if you have forgotten your details). If you at any time experience difficulty with your online submission, please contact the Editorial Assistant at ddi@sun.ac.za.

Contributing authors are requested to submit, at the time of submission of their manuscripts, a list of at least five persons that they consider well qualified to review the submitted work (e-mail addresses should be included). The list should NOT include any current or recent collaborators in work that is closely related to the topic of the submitted paper, or any persons within the same organization as any of the authors of the submitted work.

All enquiries should be directed to:

Prof. David M. Richardson
Centre for Invasion Biology (CIB)
Science Faculty
University of Stellenbosch
Private Bag X1
Matieland 7602
South Africa

Tel: +2782 902-9024
Fax: +2721 808-2995
E-mail: rich@sun.ac.za
CIB website: www.sun.ac.za/cib

Pages and lines should be numbered to aid cross-referencing (in MSWord, go to "Page Setup" then "Layout"; select "Line numbers"; click on "Add line numbers" and select "continuous").

Only papers written in English will be accepted. The journal cannot provide detailed editing of manuscripts to correct English. Where necessary, authors should have their manuscripts checked by a native English speaker *before* submitting their work.

Abbreviations and units. SI units (metre, kilogram, etc.) are essential. Statistics and measurements should be given in figures, i.e. 10⁺mm, except where the number begins the paragraph. When the number does *not* refer to a unit of measurement, it is spelt out, except where the number is greater than 10.

Tables

Tables must be positioned on separate sheets and numbered consecutively (Table 1, Table 2, etc.). Column headings should be brief: with units of measurement in parentheses. Tables should be typed as text, using 'tabs' (not spaces) to align columns. The use of table editors should be avoided. Do not use graphics software to create tables.

Methods

Please ensure that this section is entitled 'METHODS', and not 'MATERIALS AND METHODS'.

Figures, Illustrations and Maps

All illustrations (including photographs) are classified as figures and should be numbered consecutively (Fig. 1, Fig. 2, etc.). When submitting a manuscript to Manuscript Central, authors should upload a single text file with embedded figures. **Upon your manuscript being accepted for publication, please supply separate files containing electronic versions of your figures (see File Formats, below).** Please note that your paper will go through production more quickly if instructions on content and format are followed carefully. Each figure must have a legend that makes the material completely understandable. Legends should be presented separately from the figures, in a list at the end of the manuscript. Label multi-panel figures (a), (b), (c), etc., preferably in the upper left corner, and refer to them in the text as, for example, Fig. 1(a). Please ensure that electronic artwork is prepared such that, after reduction to fit across one or two columns or two-thirds width (80 mm, 169 mm or 110 mm, respectively) as required, all lettering and symbols will be clear and easy to read, i.e. no labels should be too large or too small. Avoid using tints if possible; if they are essential to the understanding of the figure, try to make them coarse.

Maps that display area data and organism distribution at a continental, hemispheric, or world scale must always use an equal-area map projection (e.g. Mollweide or Aitoff's). Note especially that Mercator's projection is not acceptable for such data. Please indicate the precise projection employed in the caption. On these maps, the equatorial scale should be indicated, while scale information should be provided, preferably as a scale bar within the figure, for all maps of whatever size and area.

File Formats: After acceptance of your manuscript for publication, figure files should be supplied as follows.

Photographic figures should be saved in tif format at 300 d.p.i. (or failing that in jpg format with low compression). **Line figures** should be saved as vector graphics (i.e. composed of lines, curves, points and fonts; not pixels) in eps or pdf format, or embedded as such in Word, as this enhances their display when published online. **Combination figures** (those composed of vector and pixel/raster elements) should also be saved in eps or pdf format where possible (or embedded as such in Word). If line figures and combination figures cannot be saved in vector graphics format, they should be saved in tif format at high resolution (i.e. 600 d.p.i.) (do not save them in jpg format). If you are unsure about the resolution of your tif files, please zoom in and check that fonts, curves and diagonal lines are smooth-edged and do not appear blocky when viewed at high magnification.

Note that line and combination figures supplied in tif format are downsampled for online publication and so authors should preferentially opt for vector graphic formats for these figure types (full resolution tif files are used for print publication).

If there is **colour artwork** in your manuscript when it is accepted for publication, Blackwell Publishing require you to complete and return a [Colourwork Agreement Form](#) before your paper can be published. Once completed, please return the form to the Production Editor at the address below:

Production Editor
Diversity and Distributions
Blackwell Publishing
101 George Street
Edinburgh, EH2 3ES, UK.
Fax: +44 131 226 3803
E-mail: ddi@oxon.blackwellpublishing.com

Any article received by Blackwell Publishing with colour work will not be published until the form has been returned. Under exceptional circumstances, authors may request the above charges to be waived. This must be done, in writing, at the time of submission of the manuscript, and authors must justify to the Editor that inclusion of the figure(s) in colour is essential for interpretation of the results presented. If authors wish to apply for funds to cover the costs of colour printing, the Editor will provide relevant support letters to funding bodies, indicating acceptance of the paper. Note that we offer a free Colour on the Web option whereby authors can have figures printed in black and white in the journal but in colour in the online version, free of charge.

Appendices and Supporting Information Appendices may be provided for important primary data, which needs to be included in the paper. If, however, these data are very extensive, or if they are of only indirect relevance to the paper, they will normally be made available in an electronic form through the Journal's web pages. Mention of the first supporting appendix, table or figure ,etc., in the text should be in the form "see Appendix S1 in Supporting Information" [where 'S' indicates Supporting], subsequent mention should be in the form "see Appendix S2". Authors should then include a Supporting Information section after the References section, which should be in the following form (text in curly brackets is for completion by the author, see instructions below):

Supporting Information

Additional Supporting Information may be found in the online version of this article:

Appendix S1 {Insert short legend to online appendix 1}
Appendix S2 {Insert short legend to online appendix 2}

Please note: Blackwell Publishing is not responsible for the content or functionality of any Supporting Information supplied by the authors. Any queries (other than missing material) should be directed to the corresponding author for the article.

Only short legends to online appendices should be given in the Supporting Information section; full legends can be given with the online supporting information itself. In the above URL, 'YEAR' is the year of article acceptance (e.g. 2007), and '12345' is the 5-digit production office code for your paper, e.g. 00361. Supporting Information files are hosted by the Publisher in the format supplied by the author and are not copy-edited by the Publisher. It is the responsibility of the author to supply Supporting Information in an appropriate file format and to ensure that it is accurate and correct. The onus is on the author to ensure that material is sent in a correct form at the time of submission. Note: if authors supply links to their own web sites, Blackwell Publishing is not responsible for the material on these sites. Further information on Supporting Information is available [here](#).

References. We recommend the use of a tool such as [EndNote](#) or [Reference Manager](#) for reference management and formatting.

EndNote reference styles can be searched for here: <http://www.endnote.com/support/enstyles.asp>; Reference Manager reference styles can be searched for here: <http://www.refman.com/support/rmstyles.asp>. References should be made by giving the author's name with the year of publication in parentheses. When reference is made to a work by three authors or more, only the first name and *et al.* should be given in the citation. All authors' names should be listed in the reference itself. If several papers by the same author and from the same year are cited, a, b, c, etc., should be inserted after the year of publication. References must be listed in alphabetical order at the end of the paper in the following standard form:

Cox, C. B. & Moore, P. D. (1999) *Biogeography: an ecological and evolutionary approach*, 6th edn. Blackwell Science Ltd, Oxford.

May, R.M. (1994) The effects of spatial scale on ecological questions and answers. *Large-scale ecology and conservation biology* (ed. by P.J. Edwards, R.M. May and N.R. Webb), pp. 1-17. Blackwell Scientific Publications, Oxford.

Prentice, I.C., Guiot, J., Huntley, B., Jolly, D. & Cheddadi, R. (1996) Reconstructing biomes from palaeoecological data: a general method and its application to European pollen data at 0 and 6 ka. *Climate Dynamics*, **12**, 185-194.

Please note that **titles of journals should be written in full**. Unpublished data, works in preparation and papers submitted but not yet accepted may be cited in the text, giving the author's initials and surname, but should *not* be included in the reference list.

Copyright Transfer Agreement. Authors will be required to sign an Copyright Transfer Agreement (CTA) for all papers accepted for publication. Signature of the CTA is a condition of publication and papers will not be passed to the publisher for production unless a signed form has been received. Please note that signature of the CTA does not affect ownership of copyright in the material. (Government employees need to complete the Author Warranty sections, although copyright in such cases does not need to be assigned). After submission authors will retain the right to publish their paper in various medium/circumstances (please see the form for further details). To assist authors an appropriate form will be supplied by the editorial office. Alternatively, authors may like to download a copy of the form www.wiley.com/go/ctaaglobal. The form should be returned by post, fax or e-mail attachment to: Production Editor, Diversity and Distributions, Wiley-Blackwell, 101 George Street, Edinburgh EH2 3ES, UK, Fax: +44 131 226 3803, E-mail: ddi@oxon.blackwellpublishing.com

Online Open. OnlineOpen is a pay-to-publish service from Blackwell that offers authors whose papers are accepted for publication the opportunity to pay up-front for their manuscript to become open access (i.e. free for all to view and download) via the Blackwell Synergy website. Each OnlineOpen article will be subject to a one-off fee of £1300 (equivalent to \$2600) to be met by or on behalf of the Author in advance of publication. Upon online publication, the article (both full-text and PDF versions) will be available to all for viewing and download free of charge. The print version of the article will also be branded as OnlineOpen and will draw attention to the fact that the paper can be downloaded for free via the Blackwell Synergy service.

Any authors wishing to send their paper OnlineOpen will be required to complete the combined payment and copyright licence form available from our website at:

http://www.blackwellpublishing.com/pdf/DDI_OOF.pdf

(Please note this form is for use with OnlineOpen material ONLY.)

Once complete this form should be sent to the Editorial Office along with the rest of the manuscript materials at the time of acceptance or as soon as possible after that (preferably within 24 hours to avoid any delays in processing). Prior to acceptance there is no requirement to inform an Editorial Office that you intend to publish your paper OnlineOpen if you do not wish to.

The copyright statement for OnlineOpen authors will read:

© [date] The Author(s)
Journal compilation © [date] Blackwell Publishing Ltd

Proofs. The corresponding author will receive an email alert to download an PDF file of the proof. Acrobat Reader will be required in order to read this file. This software can be downloaded (free of charge) from the following Web site:

<http://www.adobe.com/products/acrobat/readstep2.html>

This will enable the file to be opened, read on screen, and printed out in order for any corrections to be added. Further instructions will be sent with the proof. Proofs will be posted if no e-mail address is available. **The proofs should be returned to the Production Editor within two weeks of receipt.** Major alterations to the text and illustrations are only accepted when absolutely necessary; the additional costs may be charged to the author.

Offprints. The corresponding author will receive a PDF offprint upon publication of the manuscript. This replaces any free paper copies. Additional paper copies may be purchased and should be ordered when proofs are returned. Offprints are normally sent out about 3 weeks after publication.

Policy on the use of RAPD markers. The appropriateness of RAPD markers for population genetic inference is increasingly questioned by our reviewers and editors because of concerns about reproducibility, dominance, and homology. Given these worries, and the ready availability of other kinds of markers that do not suffer from all of these problems, studies based primarily on RAPDs only rarely pass the scrutiny of peer review in Diversity and Distributions. Of course, there may be situations in which RAPDs are appropriate, such as in genetic mapping studies or in searches for diagnostic markers for a given species or trait. These latter kinds of studies will continue to be reviewed by the journal.

Policy on molecular sequences. It is a condition of publication that papers using new molecular sequences must place the sequences in an appropriate database (e.g. GenBank). Relevant accession numbers should be provided in the final manuscript. Accession numbers are required for all sequences used in analyses, including existing sequences in databases.

NEW: Online production tracking is now available for your article through **Blackwell's Author Services**. Author Services enables authors to track their article - once it has been accepted - through the production process to publication online and in print. Authors can check the status of their articles online and choose to receive automated e-mails at key stages of production. The author will receive an e-mail with a unique link that enables them to register and have their article automatically added to the system. Please ensure that a complete e-mail address is provided when submitting the manuscript. Visit www.blackwellpublishing.com/bauthor for more details on online production tracking and for a wealth of resources including FAQs and tips on article preparation, submission and more.
